PLAN | BELIEVE | ACHIEVE

Project Maximus

Dear all,

Best wishes for a Happy New Year to you.

It has been just a few weeks since the launch of Project Maximus at Lonavala. The commitment and strength of all the teams is evident for achieving and surpassing targets of S.O. Tenancy, EBIDTA and SLA performance.

As you are aware, the telecom industry is now geared up with data growth prospects in 3G and 4G services. This is an excellent opportunity to secure new tenancies on our towers. At the same time, let us appreciate the customer requirements for better SLA performance. Our focus on up-gradation of customer specific important sites and SLA improvement programmes are reinforcing customer confidence on GIL-CNIL.

So, While the progress on Project Maximus is heartening and competition among teams is on, let us all enhance the efforts in Q4 and close FY2015 with new records may it be new tenancies or uptime. Let's adopt the mantra of "Good, better, best. Never let it rest. Until your good is better and your better is best."

COO's Office.

Global Scenario:

Europe leads the way in active infrastructure sharing

With the industry moving from 2G to 3G, and now to 4G, and long term evolution (LTE) and LTE-Advanced (LTE-A), telecom operators are increasingly looking at ways to optimise network costs. In its "Evolution to LTE" report, the Global Mobile Suppliers Association (GSA) has stated that a total of 442 LTE networks had been launched across 147 countries as of October 2015. Meanwhile, 142 LTE operators were investing in LTE-A deployment, studies or trials in 62 countries, and 95 operators had commercially launched LTE-A networks in 48 countries.

Europe has been the most mature region in terms of sharing active infrastructure, with almost 15 deals being signed between network operators as of December 2014

In the Americas, network sharing has been dominated by deals between tower companies. However, these are still limited to only five countries in the region: Brazil, Chile, Columbia, Mexico and the US. The Middle East and Africa region is also lagging behind in terms of active sharing. There have been only few active infrastructure sharing deals here till date – one in Israel in November 2013 and the other in South Africa in March 2014.

Conclusion

Despite being limited so far, active sharing is slowly gaining momentum around the world, driven by faster LTE deployment and the need for improving coverage. It is expected to pick up as the telecom industry takes a step beyond LTE and experiments with LTE-A, which is claimed as the best solution for providing true 4G and even 5G speeds. LTE-A is an upgrade from LTE in the sense that it facilitates carrier aggregation (CA), a technology in which operators around the world are showing interest. CA allows the aggregation of multiple LTE carriers with different bandwidths into a single LTE-A carrier with enhanced bandwidth.

The industry is seeking innovative solutions for increasing the capacity of existing networks a thousandfold to meet the meteoric rise in data demand, and infrastructure sharing is among them. According to data from GSA, 4G LTE networks will cover more than a third of the global population by end-2015 as their deployment continues to accelerate. To save on the opex and capex required for rolling out new 4G networks, operators are likely to increasingly adopt active infrastructure sharing.

However, active infrastructure network sharing involves agreements on a variety of operational parameters, making network governance very challenging. Partners may have to jointly agree on certain key criteria, which can turn out to be quite complex and time-consuming.

Despite these challenges, active infrastructure sharing is likely to pick up across countries as the expansion of 3G services and the launch of 4G provide an added impetus to assess its commercial and regulatory viability.

passion *for* action

Congratulations to the following employees which have achieved their duties with either speed, quality, difficult circumstances or emergency work, while maintaining normal workload or using pro-activity, initiative & creativity to solve an unusual problem.

Chennai Floods - Customer Appreciation

Dear GTL team

Yes, it was a great disaster ever seen in Chennai Telecom history by any mobile operator. It looks for me that you have reacted very well wherever possible and supported restoring the mobile communication to the normal public during this emergency.

Congratulations and thanks to GTL teams who really worked to keep the network up-time.

Y Sreenivas

Dy. CTO Wireless – TN, Reliance JioInfocomm Ltd

Dear Rizwan,

On behalf of my team in Idea, I wish to place my sincere gratitude and appreciation to you and your entire team in GIL for the whole hearted support rendered by you during the crisis. Restoration of the network under this distress condition would not have been possible without your support.

From the bottom of my heart, a big thanks to you all.

R's
UNNI

Dear Rizwan / Eswar and the entire GIL and CNIL team,

We really acknowledge the effort and support extended by your team in restoring out network fast.

Great Team work.

*Thanks and regards,
Cheenu*

Dear Eswar and Pramoth,

As we are all aware, the torrential rains in Chennai and Pondicherry have played havoc since the last few days and have disrupted normal life. Telecom Networks in Chennai and Pondicherry have also been severely affected by the flood conditions in these cities. As things stood last week, it seemed extremely difficult for the networks to attain normalcy anytime soon.

As on today, MTS Network down site count has drastically reduced from 300+ sites to 1 site. This is a testimony to the amazing work done by the teams and a successful exhibition of their "never say die" attitude. During these 6 days of emergency, our teams in Chennai & TN exhibited amazing passion, dedication and worked relentlessly to overcome all the challenges. Needless to say this was impossible to achieve but for the same amount of dedication & passion from our valued partner teams.

No amount of words can convey our sincere gratitude to all those of your team members who have worked tirelessly in getting the network restored.

In sincere appreciation of your valuable help, Please accept our respect and gratitude.

Sriniwaas

Head, Network Division

Network, TAMILNADU

Sistema Shyam Teleservices Limited

We appreciate the efforts of GIL/CNIL team members for bringing the Network back on track, braving the fury of nature. Well done

Jacob
